PROJECTS

OKCinema - *codesbymo.github.io/okcinema*

Github: *github.com/CodesByMo/okcinema*

JUNE 26TH 2019

A web application to help you find a movie to watch, at random. Utilizing Javascript & jQuery, Ajax, and Bootstrap in addition to OMDB API to query movies and YouTube API to play a relevant video or movie trailer.

Role: Design, Bootstrap and YouTube API

porK - *pork-answers.herokuapp.com*

Github: *github.com/CodesByMo/porK*

AUGUST 24TH 2019

Forum website built for asking questions and receiving answers similar to Quora, Reddit, and Yahoo Answers. Using MySQL for storing site data & D3.js to visualize activity to use in future marketing of the site. Built with Javascript, Bootstrap and designed in Photoshop.

Role: MySQL Database configuration, Design & implementation and Data Visualization

ecobourne- *ecobourne.herokuapp.com*

Github: *github.com/CodesByMo/ecobourne*

OCTOBER 16TH 2019

Ecobourne is a Life Cycle Simulation game. The simulation is a standalone desktop application with a companion web app for tracking live game data on mobile or desktop. The standalone app is built in Electron & the web app is built in React.js with Socket.io, MongoDB, D3.js visualization, and Firebase.

Role: Building pages and components in React. Design crafted in Photoshop and & implemented in React with hand-coded CSS animations.
